1.3. KINGS SQUARE ESTATE (PLAN MAKING STUDIO I MODULE, UCL, LONDON, UK 2024)

PLAN MAKING VIA DENSIFICATION

The project's aim was to increase the density of the Kings Square Estate in Islington.

The brief was very loose, so we had to be creative in our planning. Defining density and densification was the first step. Our plan-making ideas should then be based on this definition.

To densify, I chose a dual approach **of hard densification, including building new buildings,** and **soft densification, including placemaking and infill and build-up.**

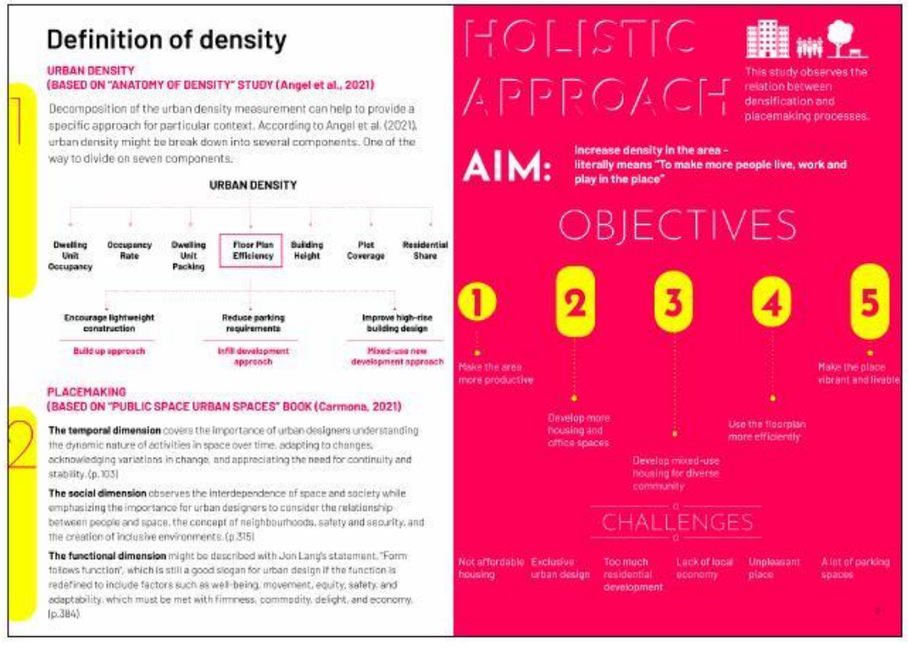

Figure 1.5: Depicts the approach I applied to increase Kings Square Estate density

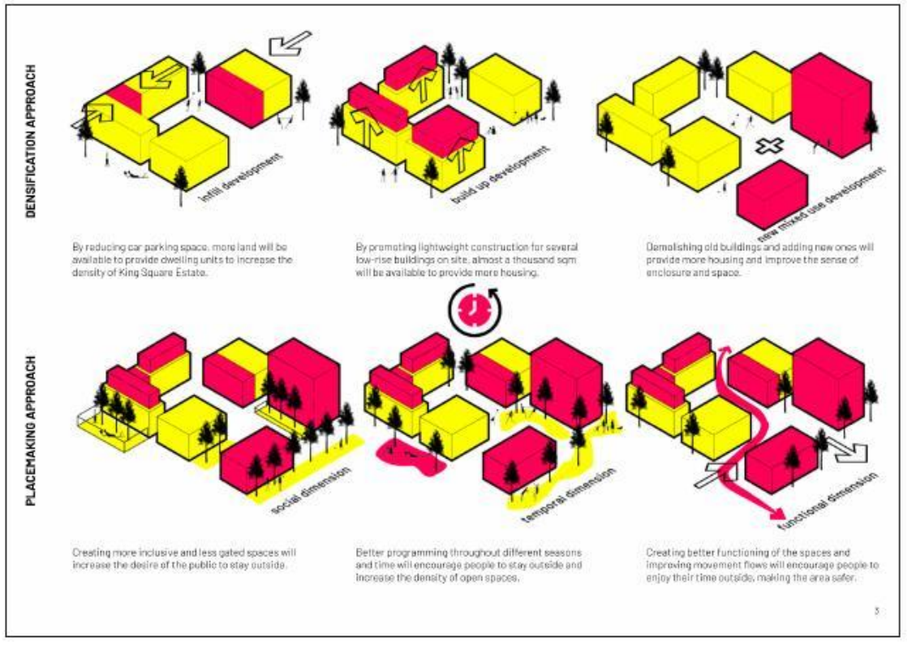

Figure 1.6: Diagrams show the binary approach of hard densification by additional development and soft densification by increasing the number of people using the place.

Figure 1.7: Master plan shows the additional development

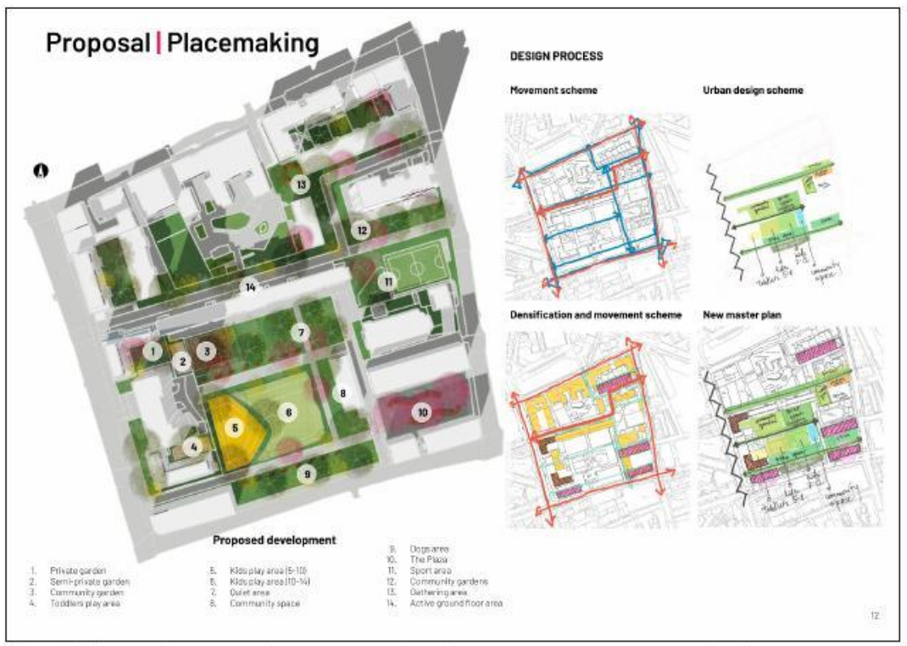

Figure 1.8: Placemaking master plan represents urban design interventions to increase the density

My role: I developed this project individually. This report has 17 pages.
